

BOIL WATER ADVISORY LIFTED

BUTLER WATER CUSTOMERS MAY RESUME NORMAL WATER USE

Butler Water customers were notified on Monday, June 24th of a mandatory Boil Water Advisory due to high turbidity levels at the water treatment plant. We are pleased to report that the treatment process was restored to optimal performance and required samples have been analyzed with satisfactory results.

There is no longer a need to boil your water, and you may resume normal water usage.

******This notice only applies to customers served directly by the Butler Water Department. Bloomingdale Water Department, Kinnelon Water Department and Highcrest (PVWC) customers must independently lift their own Boil Water Advisories, their customers should continue to boil water until they are notified by their respective water systems.******

Additionally, the water use restrictions on lawn watering and unnecessary water use implemented on Thursday, June 20th are also lifted effective immediately.

What was done?

Butler's treatment plant operators restored the treatment process to optimal performance shortly after the high turbidity level occurred, and turbidity levels returned to satisfactory. As a precaution, and in accordance with NJDEP regulations, a Boil Water Advisory was issued to customers until further sampling and analysis could be completed to confirm the safety and satisfactory quality of the water. Butler Water consulted with NJDEP and provided necessary data for their review. At NJDEP's direction, water samples were collected from various locations in the water system and analyzed by a third party state-certified laboratory to confirm the drinking water was safe for use. The sample analysis has been completed and the results are satisfactory.
